

I continue to have concerns about the moves to create a non-level playing field in the communications industry. First with local loop services (cable providers do not need to allow transmission in their facilities, but the LEC does). Not the threat to make over-the-air providers "different" from local market providers is a continuation of the same non-sensical anti-free market trend started by special interest groups.

Please do not restrict over-the-air providers such as XM from carrying local content.

PLEASE OPPOSE HR 4026

JF Mergen
